

**Ball2Head — Pressure vs Biological Vulnerability**  
Calibrated: Phillips et al. (2026) | Velocity Input Only | Standardised 18 m/s Comparison

Heading Impact Pressure — All Ball Types @ 18 m/s (Dry)  
Pressure alone suggests Elite > Youth — BUT THIS MISSES BIOLOGICAL VULNERABILITY

**CRANIAL VULNERABILITY RATIO — Youth > Elite at SAME Impact Velocity**  
Biological Correction: Thinner Youth Skull = Higher Real Exposure
